
PROJECT TOPIC: MEDICONNECT

Group No.: 5

Project Group Members:

1. Aryan Rathore (A-14/2442010109)
2. Anupam Upadhyay (A-13/2442010090)
3. Ashmit Dixit (A-15/2442010114)

Project Supervisor: Mr. Aman deep Singh, Assistant Professor

About the Project

MediConnect is an intelligent healthcare platform that unifies medical records, clinical workflows, and AI-powered insights into one secure ecosystem . The platform addresses health data fragmentation by providing a centralized dashboard for patients and doctors . Key features include a secure login portal , a personal health dashboard for viewing visit history and reports , and a dedicated doctor interface for searching patient records via Aadhaar .

Motivation

The motivation behind MediConnect is to solve the problem of scattered physical medical records and lack of seamless communication between patients and providers . By digitizing consultations and providing instant access to historical data, the project aims to reduce diagnostic errors and improve treatment speed . This qualifies as a major project due to its integration of secure authentication, database management, and AI-driven data visualization

Project Planning

Development follows a structured SDLC approach starting with requirement analysis and UI/UX design.

The MERN stack is used for scalability, with parallel development of Doctor and Patient modules followed by AI tool integration.

Project Timeline

PHASE	Feb (W1-W4)	Mar (W1-W4)	Apr (W1-W4)
Requirement Analysis	Done	-	-
UI/UX Design	In Progress	-	-
Backend Setup	-	Planned	-
Frontend Development	-	Active	-
AI Module Integration	-	-	Planned
Testing & Deployment	-	-	Final

Tools Required

Hardware Requirements:

- Laptop/Desktop (Min 8GB RAM) [cite: 112]
- Stable Internet Connection [cite: 113]

Software Requirements:

- VS Code (Code Editor)
- Frontend: React.js, Tailwind CSS
- Backend: Node.js, Express.js
- Database: MongoDB (NoSQL)
- AI/ML: Python/Flask (for analysis)
