

Real-World Problem Statements:

1) College Event & Hackathon Information Website:

Description:

Students often miss important details about college events such as schedules, venues, rules, and registration deadlines due to scattered information across platforms.

Problem:

Lack of a centralized, easy-to-understand digital platform for event information.

Task:

Design a responsive website that displays event details, schedules, rules, coordinators' contact information, and registration links in a clean and organized layout.

2) Local Business Static Website:

Description:

Small local businesses often rely only on offline customers and word-of-mouth promotion.

Problem:

Absence of a simple online presence reduces reach and credibility.

Task:

Design a professional website for a local business showcasing services/products, business information, location, and contact details.

3) Smart Campus Resource Booking Website:

Description:

College resources such as labs, seminar halls, and equipment are often booked informally, leading to clashes and mismanagement.

Problem:

No transparent system to view availability or booking status.

Task:

Create a web-based solution that displays resources, available time slots, booking status, and confirmation views using a clean interface.

4) Restaurant Ordering & Table Management System:

Description

A digital restaurant system to manage online orders, table reservations, and kitchen workflows.

Problem

Manual ordering leads to errors, delays, and inefficient table utilization.

Tasks

Digital menu and order placement

Table reservation system

Kitchen order management dashboard

Admin control for pricing and availability

Order status tracking

5) Lost & Found Web Portal:

Description:

Lost items on campuses or public spaces are often never recovered due to scattered communication.

Problem:

No centralized digital system to report and search items.

Task:

Create a web portal where users can post lost/found items, filter by category, and contact item owners securely.

6) Smart Appointment and Queue Management System:

Description

Hospitals and government offices often face heavy crowds and long waiting times. This system provides an online platform where users can book appointments and view queue status in real time while administrators manage schedules efficiently.

Problem

Manual appointment handling causes delays, confusion, overcrowding, and poor user experience due to lack of real-time updates.

Tasks

Users can register and log in

Users can book, reschedule, or cancel appointments

System shows current queue status

Admin can manage time slots and availability
Notifications are sent for updates or changes

7) Job and Internship Matching Portal:

Description

This platform connects job seekers with employers by matching skills, experience, and job requirements through a web-based system.

Problem

Candidates struggle to find relevant opportunities, and employers face difficulty in shortlisting suitable candidates efficiently.

Tasks

Separate login for job seekers and employers

Employers can post jobs and internships

Candidates can apply and track applications

Implement skill-based filtering

Dashboard for managing applications

8) Disaster Information & Emergency Help Website:

Description:

During emergencies, people need quick access to reliable information and support resources.

Problem:

Information is scattered and often outdated.

Task:

Build an emergency response website displaying alerts, helpline numbers, safe locations, and volunteer registration features.

9) Real-Time Feedback and Survey Platform:

Description

A web application that allows organizations to collect feedback and survey responses and analyze them using dashboards.

Problem

Organizations lack effective tools to collect structured feedback and convert it into meaningful insights.

Tasks

Create customizable survey forms

Collect responses in real time

Display results using charts
Admin can manage surveys
Export feedback data

10) Inventory and Stock Management System:

Description

A system designed to manage product inventory, suppliers, and sales for small and medium businesses.

Problem

Poor inventory tracking causes stock shortages, overstocking, and financial loss.

Tasks

Add and manage products

Track stock in and stock out

Manage supplier information

Low stock alerts

Sales and inventory reports

11) Online Learning Course Landing Page:

Description:

Online courses require engaging landing pages to attract learners and explain course value clearly.

Problem:

Poorly designed pages fail to convert visitors into learners.

Task:

Design a single-page website that presents course overview, curriculum, instructor details, testimonials, and enrollment CTA using good UI/UX practices.

12) Issue and Complaint Management System:

Description

A digital platform that allows users to raise complaints and track their resolution process.

Problem

Manual complaint systems lack transparency and accountability, causing delays in resolution.

Tasks

Users can submit complaints

Track complaint status

Admin assigns complaints to departments

Send status updates to users
Generate complaint reports

13) Remote Team Task and Productivity Tracker:

Description

A task management platform for remote teams to assign work and track productivity.

Problem

Remote teams face challenges in monitoring task progress and productivity.

Tasks

Create and assign tasks

Track task status

Log working hours

Role-based dashboards

Generate productivity reports

14) NGO Campaign & Donation Showcase Platform:

Description:

NGOs need transparent and engaging platforms to showcase their work and build donor trust.

Problem:

Lack of structured digital storytelling reduces engagement and donations.

Task:

Design a website that highlights NGO campaigns, donation options, volunteer registration, and impact reports with clear visual hierarchy.

15) Local Business Static Website:

Description:

Small local businesses often rely only on offline customers and word-of-mouth promotion.

Problem:

Absence of a simple online presence reduces reach and credibility.

Task:

Design a professional website for a local business showcasing services/products, business information, location, and contact details.

16) Employee Attendance and Leave Management System:

Description

Companies need a centralized digital system to track employee attendance, leave requests, and approvals.

Problem

Manual attendance and leave tracking leads to errors, misuse, and lack of transparency between employees and HR.

Tasks

Employee login and profile management

Daily attendance marking

Leave request and approval workflow

Admin dashboard for HR

Attendance and leave reports

17) Customer Support Ticket Management System:

Description

Organizations receive customer issues through emails, calls, and messages which need structured handling.

Problem

Scattered issue handling causes delayed responses and poor customer satisfaction.

Tasks

Customer can raise support tickets

Categorize and prioritize issues

Assign tickets to support agents

Track ticket status and resolution time

Admin analytics dashboard

18) Online Property Rental Management Platform:

Description

Property owners and tenants need a digital platform to manage rental listings and communication.

Problem

Rental processes are fragmented across calls, messages, and brokers leading to inefficiency.

Tasks

Property listing and search

Tenant inquiry system

Owner dashboard to manage properties

Booking and availability tracking

User authentication and roles

19) Online Appointment System for Service Professionals:

Description

Professionals such as lawyers, consultants, and trainers require a digital booking system.

Problem

Manual scheduling causes double bookings and missed appointments.

Tasks

Professional profile creation

Time slot management

Online appointment booking

Appointment history tracking

Admin control panel

20) Warehouse Order Fulfillment System:

Description

Warehouses need a system to manage incoming orders and dispatch operations.

Problem

Manual order handling causes delays and inventory mismatches.

Tasks

Order intake management

Assign orders to warehouse staff

Track order status

Inventory synchronization

Performance reports

21) Online Examination and Assessment Platform:

Description

Educational institutions and companies conduct online tests for evaluation and hiring.

Problem

Traditional exam systems lack scalability and automation.

Tasks

Create exams and question banks

Student or candidate login

Timed online assessments

Auto evaluation and results

Admin monitoring dashboard

22) Digital Document Approval Workflow System:

Description

Companies require approvals for documents such as proposals, invoices, and policies.

Problem

Email-based approvals are slow and difficult to track.

Tasks

Upload and submit documents

Define approval flow

Reviewer comments and status tracking

Notification system

Approval history logs

23) E-commerce Order Tracking and Returns System:

Description

Online sellers need a platform to manage order tracking and customer returns.

Problem

Customers lack transparency in delivery and return processes.

Tasks

Order status tracking

Return request management

Admin handling of refunds

Customer notifications

Order analytics dashboard

24) Online Freelance Project Management Platform:

Description

Freelancers and clients need a system to manage projects, tasks, and communication.

Problem

Communication scattered across platforms causes confusion and delays.

Tasks

Client and freelancer registration

Project creation and milestones

Task tracking

File sharing

Project status dashboard

25) Smart Utility Bill Management System:

Description

Residents and organizations need a digital way to track and pay utility bills.

Problem

Manual bill handling causes missed payments and disputes.

Tasks

Generate monthly bills

User bill history

Online payment integration

Payment reminders

Admin bill management

26) Healthcare Patient Record Management System:

Description

Healthcare providers need secure digital records for patients.

Problem

Paper-based records are hard to manage and prone to loss.

Tasks

Patient registration

Medical record storage

Doctor access control

Visit history tracking

Admin system monitoring

27) Online Vendor and Procurement Management System:

Description

Companies work with multiple vendors for procurement and supplies.

Problem

Manual vendor management causes delays and poor tracking.

Tasks

Vendor registration

Purchase order management

Order status tracking

Invoice upload

Admin analytics dashboard

28) Company Internal Communication Portal:

Description

Organizations require a centralized platform for internal announcements and discussions.

Problem

Information shared across emails and chats often gets missed.

Tasks

Employee login system

Company announcements

Department-wise discussions

File sharing

Admin moderation panel

29) Online Helpdesk Chat and Ticket System:

Description

Companies need a unified support system.

Problem

Chat and ticket tools are often disconnected.

Tasks

User support chat

Ticket creation from chats

Agent assignment

Status tracking

Admin analytics

30) Emotional Drift Monitoring and Visualization Web Application:

Description

A web-based system that tracks and visualizes changes in user emotions over time using AI-powered text analysis and interactive dashboards.

Problem

Current emotion detection systems analyze single text inputs and fail to capture long-term emotional patterns and behavioral changes needed by industry platforms.

Tasks

Allow users to submit text entries over time

Integrate AI services to detect emotions from text

Store emotion data with timestamps

Display emotion timelines and trend graphs

Provide user dashboards and reports

31) E-Hospital Management Portal:

Description

A web portal to manage hospital services and patient interactions.

Problem

Hospital data is scattered across multiple manual systems.

Tasks

Patient registration

Doctor schedules

Appointment booking

Admin management panel

32) Online Food Delivery Web Application:

Description

A web-based food delivery platform that connects customers, restaurants, and delivery partners to enable online food ordering and order tracking.

Problem

Customers face difficulty ordering food from multiple restaurants through phone calls, while restaurants lack an organized system to manage orders and deliveries.

Tasks

User registration and login

Restaurant listing and menu management

Food ordering and cart system

Order placement and status tracking

Admin dashboard to manage users, restaurants, and orders

33) Professional Portfolio Website:

Description

A personal web application that showcases an individual's skills, projects, experience, and achievements in a professional and organized manner.

Problem

Many students and professionals lack a centralized and professional online presence to present their work effectively to recruiters and clients.

Tasks

- Create responsive portfolio pages
- Display skills, projects, and experience
- Add contact and social links
- Enable easy content updates
- Ensure clean UI and professional design

34) Video Sharing and Streaming Website:

Description

A web-based platform that allows users to upload, watch, and interact with video content similar to popular video streaming services.

Problem

Creators and viewers need a centralized system to publish video content and engage through likes, comments, and subscriptions.

Tasks

- User registration and login
- Video upload and streaming
- Like, comment, and subscribe features
- Search and video recommendation
- Creator and admin dashboards

35) Multi-Game Web Platform:

Description

A web-based platform that hosts multiple casual games in one place, allowing users to play, track scores, and manage profiles.

Problem

Players lack a single website to access and manage multiple browser-based games with score tracking and user accounts.

Tasks

- User registration and login
- Multiple game integration
- Score and leaderboard management
- Game selection dashboard
- Admin control for adding or removing games
